

Is your drape impervious? Ours is.

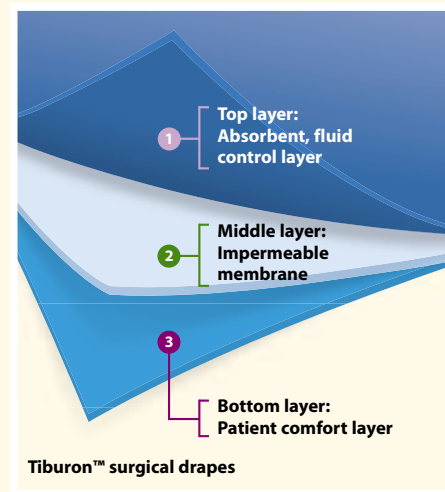

Tiburon™ Surgical Drapes

Cardinal Health's new Convertors® brand Tiburon™ surgical drapes are impervious. In a recent poll, many clinicians mistakenly identified the surgical drape they currently use as being impervious to fluid strike-through.

The truth is most drapes are not. The CDC says that 2.6% of all surgical procedures result in infection, and that all surgical drapes "should be impermeable to liquids and viruses."* Our new Tiburon™ surgical drapes pass the industry tests that measure this level of protection.

If maximizing patient safety and reducing infection are your goals, then the choice is clear – Tiburon™ surgical drapes.
