

## Presource® Central Line Insertion Packs for Procedural Areas

# Saving lives... with the right products

Cardinal Health understands that preventing surgical site infections is a number one concern of healthcare providers around the country. We developed two standard central line insertion packs specifically for Procedural Areas (i.e., operating room and interventional radiology) to complement the practice of aseptic technique. Also, with **Presource®** products, you can easily customize your pack program in order to maximize efficiency.

We've designed the **Presource®** Central Line Insertion Packs for Procedural Areas with some very unique products. First, the Convertors® Line Insertion Draping System features a three-part draping system with the flexibility to access a variety of insertion locations while providing full-body coverage. Second, we offer BIOPATCH® antimicrobial dressing with chlorhexidine. This dressing has been proven to reduce the incidence of CRBSI and local infections.<sup>1,2</sup>

## Ordering Information

Cat. No.	Description	Qty. Cs
